RE: Port of South Louisiana
Globalplex Access Road to Building 71
EDA Project No. 08-01-05363
N-Y Job No. 21005

Dear Mr. Cox,

As the contractor progressed installation of the subsurface drainage for the referenced project, several unforeseen underground obstructions became apparent. These included:

- A 4" diameter sewer line crossing the entrance road that required a new conflict box be installed in the new roadway,
- Electrical conduit in the same area as above that had to be shifted in the trench to lay the drainpipe,
- Several existing drainage structures, including drop inlets and drain manholes, were uncovered on the south side of the new access road where the alignment of the existing drainage was different than shown. These existing structures had varying types of grated openings and construction but were covered with 1 – 2 ft of fill. The solution included new drop inlets and/or adjustment to grade.
- Drainpipe materials of the existing drainage structures were found to vary in type and condition (CMP, terra-cotta and RCP).
- An additional water line was uncovered.
- A water valve was discovered under the roadway.
- While laying drainpipes, the contractor found new unforeseen steel pipes that could not be identified. This resulted in modification of the proposed drainage or the addition of conflict boxes.
- Asphalt paving was found and had to be removed.
- A concrete foundation was discovered and had to be partially removed.
- An electrical concrete duct bank was found to be crossing an existing ditch, requiring the ditch to be re-shaped based on the existing culverts.

Mr. Brian Cox
Port of South Louisiana
December 8, 2025
Page 2

- An underground electrical junction box was found during excavation for the roadway pavement section. After review and site investigation, it was agreed to remove the abandoned concrete junction box.

We have worked with the contractor to address these unforeseen conditions by issuing field directives, revising drawings and participating in additional field meetings.

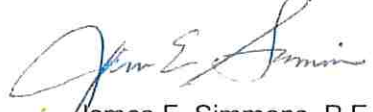

Our required plan revisions include drainage profiles adjustments as well as changing alignments to tie into newly discovered existing drainpipes and drainage structures. Some of these conflicts were resolved with approval of conflict boxes, and in other cases the profile was revised or the alignment changed.

We are requesting additional compensation for dealing with these underground issues for answering calls, attending drainage meetings, negotiating change orders and providing updated plans to resolve these issues to complete installation of the subsurface drainage system. As previously stated, as of October 31st, we have spent \$21,844 over and above normal construction administration (CA) tasks. In addition, all of the unforeseen underground utilities documented by the contractor will be added to the As-Builts along with the changes to construction. We are respectfully requesting contract **Amendment No. 3 in the amount of a not-to-exceed (NTE) allowance of \$28,000** which we will invoice against on an hourly basis based on actual time spent for additional CA effort and additional As-Built effort.

Please contact me if you have any questions or comments.

Sincerely,
