Sandy Hollow WMA Herbicide Treatment

Description of herbicide application for 125 acres on Sandy Hollow WMA, Wilmer, LA for the purpose of understory and midstory woody and herbaceous vegetation control.

Treatment (Skidder Application)

1. Herbicide to be applied with forestry skidder
 2. Herbicide mixture to be: 32 oz. Imazapyr 2lb/gal, 38 oz. Triclopyr 83.9%, 6.3lb/gal, and 32 oz. modified seed oil surfactant per acre
 3. Herbicide to be applied from date of award to 31 October or as authorized by Louisiana Dept. Wildlife and Fisheries
 4. Treatment consists of 125 acres depicted on attached maps
 5. Bid on \$ per acre basis (chemical and labor combined)
 6. **Quantity** = 125 / **Unit** = Acre
- Specify Herbicide (s) Name Bidding: _____
 - Specify Herbicide (s) Size Bidding: _____

Skidder application is desired over aerial (helicopter) application for this treatment. In order to accomplish the objectives of controlling undesirable woody and herbaceous vegetation within an existing timber stand below the over-story canopy, skidder application is the most effective method. Spraying from the ground allows chemical to be applied directly to targeted vegetation. The type of chemical being used cannot be applied from the air without damaging or killing the over-story trees.
