Isotope Ratio Mass Spectrometer

Addendum 01

Inquiries

What gas are you intending to analyze, from what sample type (ambient atmosphere, soil/plant gas, etc.), plus expected concentration range.

Will you consider a non-diff pumped system if we prove that acceptable vacuum is achieved?

Responses

Will analyze the Nitrogen and carbon isotopes from plants, soils and sediments samples ranging from natural abundance to approx. 15 atom % enrichment with nitrogen. The gas type samples will be for nitrogen and carbon dioxide in ambient air enriched with nitrogen 15. Unsure of the nitrogen enrichment in the air samples. That is up to the researcher. Must provide a true differential pumping system.
